## JOB MARKET PAPER

---

**"The impact of multinational enterprises on local labour markets: What drives the effect on domestic workers?"**

**Abstract:** This paper investigates how the presence of multinational enterprises (MNEs) affects wages and employment in domestic firms in a local labour market. As a mechanism, I examine how MNE's access to the foreign labour market can influence their effect on employment and wages in domestic firms. To circumvent endogeneity of MNE location choice, I use the variation of industry structures across local labour markets to construct a shift-share variable. Using administrative data of the universe of workers and firms from the Netherlands, I find a positive, sizeable and statistically significant effect of MNE presence on wages for newly hired workers in domestic firms. This effect is stronger in local labour markets where MNEs hire relatively few migrants (relatively more domestic workers), suggesting that labour demand drives the positive effect of MNEs on domestic wages.
